

Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

Claim 1 (Canceled)

2. (Previously Presented) The holder as in claim 21, wherein said pouch is made from a flexible material.

3. (Previously Presented) The holder as in claim 21, wherein said flap is made from a flexible material.

4. (Canceled)

5. (Currently Amended) The holder as in claim 21, wherein said flap comprises a said body section disposed adjacent to said pouch and a said fastening section disposed on an opposite end of said pouch.

6. (Previously Presented) The holder as in claim 5, further comprising a backing element substantially enclosed in said body section of said holder.

7. (Previously Presented) The holder as in claim 6, wherein said backing element is formed from a stiff material and provides a stiff backing for said pouch.

8. (Previously Presented) The holder as in claim 5, further comprising an additional fastener coupled to said body section on a side opposite said pouch.

9. (Previously Presented) The holder as in claim 5, further wherein said a longitudinally extending fastening element is coupled to a front side of said body section.

10. (Previously Presented) The holder as in claim 9, wherein said longitudinally extending fastener comprises a first flap, and a second flap and a securing fastener for securing said first flap to said second flap.

11. (Previously Presented) The holder as in claim 6, wherein said body section of said flap comprises a container disposed opposite said pouch on said body section, said container for receiving said backing element.

12. (Previously Presented) The device as in claim 11,
wherein said backing element further comprises a fastener for
securing the device to a pocket.

13. (Previously Presented) The device as in claim 12,
wherein said fastener is a safety pin.

14. (Previously Presented) The device as in claim 12,
wherein said flap has a said hole such that when said flap is
closed, said hole in said flap is positioned to allow said
fastener to extend there-through.

15. (Previously Presented) The device as in claim 14,
further comprising a safety flap coupled to said flap wherein
said safety flap is for covering said safety pin extending
through said hole in said flap.

16. (Canceled)

17. (Canceled)

18. (Currently Amended) The device as in claim ~~17~~ 21, further comprising a strap fastener wherein said at least one strap is coupled to said body section and said fastening section via said strap fastener.

19. (Previously Presented) The device as in claim 21, wherein said strap fastener is in the form of a hook and loop fastener.

20. (Currently Amended) A holder for a portable medical device having at least one elongated flexible element extending therefrom, the holder comprising:

- a) a pouch formed from a flexible material;
- b) a flap coupled to said pouch wherein said flap comprises, a body section and a fastening section;
- c) a fastener for coupling said flap closed to said pouch to form a loop wherein said fastener couples said body section to said fastening section to close said flap into a loop; d) a cover for covering said pouch;

d) a cover for covering said pouch wherein said cover is in a form of straps wherein said cover has an opening disposed therein to allow the elongated flexible element to extend therethrough;

e) at least one strap for coupling said body section to said fastening section;

f) a container coupled to said body section opposite said pouch; and

g) a backing element formed from a substantially rigid material which can be inserted into said container wherein articles for holding can be inserted into said pouch and secured in said pouch via said cover and wherein the holder can be secured to a user's body via said flap forming a loop and being secured to that person.

21. (Currently Amended) A holder for a portable medical device having at least one elongated flexible element extending therefrom, the holder comprising:

- a) a pouch made from a flexible material;
- b) a flap coupled to said pouch wherein said flap comprises a body section and a fastening section;
- c) a fastener for coupling said flap closed to said pouch to form a loop wherein said fastener couples said body section to said fastening section to close said flap into a loop;
- d) a cover for covering said pouch wherein said cover is in a form of straps wherein said cover has an opening disposed therein to allow the elongated flexible element to extend therethrough;
- e) a securing element coupled to said pouch for securing said cover to said pouch
- f) at least one strap for coupling said body section to said fastening section;
- g) a longitudinally extending fastener coupled to said flap and disposed adjacent to said pouch said longitudinally extending

fastener being positioned adjacent to said opening and for securing the elongated flexible element to the flap; and

h) a container coupled to said body section opposite said pouch; and

~~h) g)~~ a backing element formed from a substantially rigid material which can be inserted into said container wherein articles for holding can be inserted into said pouch and secured in said pouch via said cover and wherein the holder can be secured to a user's body via said flap forming a loop and being secured to that person.

22. (Previously Presented) The holder as in claim 21 wherein said backing element further includes a backing fastener and said flap further comprises a hole for allowing said backing fastener to extend there-through opposite said pouch when said flap is closed on itself forming a loop.

23. (Canceled)
